If you are not interested in internship offered by S.P.I.T. then which of the following options you will choose (select all the options you are open for)

188 responses

<i>If you are not interested in internship offered by S.P.I.T. then which of the following options you will choose (select all the options you are open for)</i>	<i>Top results</i>
Student himself/herself identifies internship and gets it approved by S.P.I.T.	137
Student can do an internship at IIT, NIT, TIFR or TISS	92
S.P.I.T. professor launches semester long internship	76
Student can do internship at SP-TBI	50
Student can do social internship	43
I want internship that is provided by college	1
Students can work on projects approved by SPIT	1
Regular semester and a 2 month summer internship	1
Im happy with semester long internship from 15th January 2020.	1
i will be interested as long as the company is a good company	1
I wanted to start my own Business and as a prerequisite have to learn the requirements of business and gain key knowledge to conduct business practices also I can learn how to operate on a regular level in tense pressure and make the business into a profitable one	1
Interested in clg internship	

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Student will take TWO 3 credit MOOC courses approved by respective departments in academic year 2019-20 to complete the credit requirements. Your comment on this.

Seems fair

Students should be allowed to pick their courses from websites of their choice. These can be approved by the respective departments. If the institution insists on having a certificate issued by the operator of the MOOC, the students should not have to pay for them, as these aren't extra or optional courses.

Good

Could be a great idea if proper tutoring is provided.

Good idea if we get a good internship

These courses should be completed as soon as possible after the start of the term 2019-20

I think the MOOC courses idea is great

I am not sure when these courses are supposed to be finished. Whether 7th sem or the complete year. And need a little clarity on electives and MOOC courses

Yes

It might be fine

Yes! Sure!!!

Yes

Great idea

Finance or Management related courses

YES

Works

Agreed

I agree

Will become very hectic if a 6 month internship is introduced since we'll have to finish it within 2 months.

Ok

The MOOC courses should be of good quality and in the area of interest of the student

Nice

It is good as students can completely focus on their internship

Excellent deal

No idea.

The coursework would seem rushed and will not be helpful. The idea of a 6 month internship would be ideal for the batch after us as it could be incorporated in their curriculum from 2nd year itself.

Not sure if those courses will be helpful

Fine with it.

Dont know the full form of MOOC.

I just want to know who is going to pay the money for those courses? We are already paying tuition fees so logically it should not be us.

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Can all sem 8 courses not be mooc so we can get summer 2019 to ourselves
Agreed
If this is additional to the current courses in Sem VII and Sem VII, there isn't a need for this. It's a big NO. We'll just do the current syllabus. And then go on for internships.
Online courses are difficult to understand
-
it could be beneficial
Fine with it
If this is additional to the courses offered in the seventh and eighth semester then this is a BIG NO. There is no need for this and we'll complete our syllabus and go on with the internships. Also if this is implemented then the college has to INCUR THE CERTIFICATION FEES incase this is implemented
-
Its a good idea but the process of opting those courses and which courses will be the best for us has to be explained by the concerned faculty because if students are not able to complete those courses after selection of the courses it would be difficult to cope up with it.
I feel that as the credits are at stake for the MOOC courses , logically students will try to go for the simplest course to earn those credits . Also I feel that these courses cannot do proper justice to the courses which are actually taught in the class with expertise .
Can be viable option, it will be better to do it under teacher's supervision
It would be great if our college collaborate with academic portals like edX,Udacity, Coursera which have already courses designed for particular specialisation. It would help us to bolster our resume for Higher Studies and applying for core companies.
MOOCs Should be interdisciplinary
But it should depend upon student interest
Can this section be discarded and it's credits merged with the internship credits? Because just 5-6 credits for 4 months of work sounds less
If the MOOC course fees will be paid for by the college, it is acceptable.
Ok certi fee should be provided by college since credit based course
Not sure about these Mooc courses.
No problem
The courses are good but it create some sort of presure on the students to complete the course too along with the internship
It works until and unless credit
Good, it's better than classroom anyway
The idea is good but the funding for the courses should be provided by the college.
The mooc course credits should be given to internship and it should be a 0 credit course so that it reduces the stress on students
not an issue.
Ohk
It is an appropriate measure to ensure learning of courses other than that of academics.
Important opportunity to learn something new

Sardar Patel Institute of Technology
Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Ok
I agree as long as there are at least 1 or 2 options of my areas of interest
Students should be given options for choosing MOOC courses. MOOC course should be from a reputed University and should have standalone value in future.
I think this is a great system. The students who have joined the SCOPE courses would especially benefit from this system.
Should not be hectic for students
Good.
No
No
No
It should be completed as soon as possible
No
Don't know what this means.
Fine only if it is not a burden.
Fine only if it is not a burden.
Fine.
Sounds good
Fine but we will not be able to do projects and take part in competitions for the entire year because the competitions stretches upto march and april
No comments
Classroom training would be more preferable
No
Good
Ok but they will be on what basis
.
Fine
Will be great if you have Management related courses. what
Will do
no,
Okay
i
Ok with it.
What is the need to those 2 mooc courses when we are already having so much to do from summer vacation onwards.
Idea is good, but what platforms of moocs are available for the students should be specified. Also if the necessary hardware is available in college which is required for that mooc, it should be made available for students
Excellent.

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

No problem
Ok
Okay.
2 courses are fine , but the courses that are approved should be helpful to what we want to pursue
If the courses help build essential skills, then it is best for students
Its a good initiative and can be beneficial if selected a course with great content and material
no
Okay
Sounds good
Alright.
fine with this
If it benefits us, then it's good enough.
Agreeable
It is an excellent idea as long as the MOOC delivers all the neccesary content and is from a certified, authentic and recognized source.
no
?
For a vaild certificate we need to pay. But we are already paying tution fees.
Yes
Nice idea but all the online courses are paid, so apart from tution fees we will have to even pay for these courses.
Seems fair
This is ok but that moot courses are really beneficial to us ? Wat they are actually about?
It's good, only if it's not too hectic
It can be done as long as we are informed well in advance and the college takes care of the costing of those courses
Not sure, depends on how the MOOC courses and their evaluation is conducted
This is a good idea
Sounds good
this is better
N/A
Yes, it is a good idea to get the credits through mooc courses but only if it doesn't turn out to be a bit hectic for a student to work and study for this course as well.
Don't know much about this exactly
I will be doing it.
The MOOC courses should be focused on the practical knowledge of students. This will help them during intership.
It's fine.
Seems highly unnecessary to put the load on students

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

The choice of courses should be flexible. Department should give only the topics and not the specific course from specific website
Will help for internship programme
No
Ok
Yes
Great Initiative.
It's a nice idea
Fees should not be taken for mooc courses
I have already opted for scope courses
MOOC courses are of not much help. They are difficult to complete. Sudden change in the way of learning may not be helpful always!!
NA
no please that will be too much for us
I don't have any idea about it
I am fine with this option.
I do not feel that the MOOC Courses are feasible. The MOOC Courses, along with the rest of the course credits will be very burdensome for the students. If the 7th and 8th semester is to be completed within the time frame of May-Dec 2019, then we will have to cope with courses of 7th semester, 8th semester, and MOOC Courses. This will be a very large number of courses for a given short period of time. Moreover, cost of the MOOC Courses will have to be borne by the students themselves, apart from the tuition fee being paid.
No issues.
The option for choosing subjects out of the students core field should also be provided

-
Good only if the course is structured properly.
Most of these courses are paid if we want certification. Who will pay for them?
Yeah its good move
Yeah its good move
Don't want MOOC courses
No issues.
Sounds good unless it doesnt increase the work load.
Reasonable
Yes I like it
yes it will be beneficial
thats good
yes
no need as such but if implemented compursarily ,will surely be useful

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Apprehensive about this idea, since if given a long time to complete 3 courses we may take our time to complete them and yield nothing out of it.
Taking the courses is a good idea but in order to obtain the certificate for the course we will need to pay
That's Fine!
Fine by me
Students should be asked which courses they want
Fine by me
Good Idea
It will save time and can get more industry experience
-
I am fine with this arrangement.
I believe this is a great way to learn different technologies
Should not be hectic.
OK
Yes
Yes but the mooc courses should be something that college suggest
N/A
Nice thought
The MOOC courses should be as per the industry standards.
Please take care to ensure the quality of the courses.
Agreed
This is fine , as long as the mooc courses don't overburden us
Good decision, students can learn courses which they like.
.
Fine ,
Fine
It's a good idea
It will be hectic along with the internship.
Sounds good
Yes

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Any other comment or suggestion? If you have selected NO for question 1 then please mention why?

More insight about the companies coming for placement must be provided

While I laud the initiative, I must say that as a student whose career is at stake I have the following concerns which should be addressed. Firstly, if the college is to move to a placement process dictated by industrial training/internships after 3rd year, assurances must be given that opportunities will not lessen in number or quality. Secondly, there should be a contingency in place for those students who either are unable to secure internships and consequently PPOs, or those that have unsatisfactory experiences at the internship. Said contingency must be in the form of a stand alone placement policy such as the one that already exists for BE students in status quo.

Nyhing

-

Internship will definitely be a differentiating factor between us and all other students from other institutes. But what matters the most is the quality of the internship, which company or startup it is. If only a selected few get good companies and rest all get or don't get internship then what will happen. Doing internship in which work doesn't add to your resume then there is no point doing internship

We want to make sure that everyone who are getting internships must get opportunity to apply for placement if they are not placed by the interned company

none

We request you to give a brief and clear explanation on the upcoming changes to be made in the curricular. And if last year only 25% of students got internships, then can this change guarantee more offers for internships and prove to be beneficial for students?

By transferring some subjects of sem 7 to sem 6, burden on student can be reduced

What if we don't get ppo from the company giving us internship?

Hopefully it works as planned, it shouldn't happen that since it's happening for the first time, it doesn't provide good internship and placements. And since we're in Electronics branch we want core Electronics companies, not IT companies!

No

Will help us a lot by this initiative

We won't get enough time to study for entrance exams as there is no vacation.

-

Ensure that every student gets internship. Otherwise the proposal may backfire.

None

If this internship decision is implemented then we'll get less no. of holidays and not get any chance of learning new technologies. So it will be good if we get at least 20-25 days off

Not beneficial since students looking to go for higher studies require a 2 month internship and not placement.

Great idea

This is unfavorable for students who wish to pursue higher studies immediately after BE. The application deadlines for MS will be in around October 2019, and by this method the students won't have done any internship till then to write in their profile. Further the companies will prefer only students who are willing to convert the internship to a placement and not the MS students. So the MS

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

students won't get internship in good companies which will negatively affect their profile.
None
This is good initiative by SPIT and would prove very fruitful if next year onwards the students from year 2017-2021 are provided internship in semester 6 only.
In recent times after autonomy there has been less cooperation between the TPO and academic wing causing the placement scene to be quiet shaky and so a better communication and understanding can help in getting a better solution.
Im happy with summer long internship
I think that the idea is good, however it is too late for our batch. The syllabus will be rushed and it will get too hectic for us to handle. For students pursuing their masters, it is a disadvantage as we will not have an LOR from the employer.
If the idea of semester long internship is implemented, the students should be provided with a certain LOR for their application for their MS
While the notion of a 4 month internship is very nice, keeping it after the 7th semester is detrimental to the students opting for higher studies, since applications are sent by the end of the 7th semester. Most good applications need a LOR from the place the students have done an internship and they even need to write what they did over the internship. So that won't be possible if the internship is delayed and kept after the applications have been sent. However, this is a very good plan if the internship is kept after the 6th semester and the 7th semester is delayed by a couple of months since it will add to the profile of people opting for placement, as well as masters.
Please get more number of companies for internship, now also we require internship we can't wait till semester VI
Last year less than 30% students got internship (our immediate seniors). Let assume the figure will get doubled. But still almost 50% people will land up research Internship or internship at SP TBI. Honestly, I don't want to work at SP TBI after I have completed my engineering and there's a big difference between research internship under a professor and getting industry experience. Plus there will be lot of academics load.
I find it risky. I don't know what companies will be coming and applying off campus for a 6 month internship is tough. I want to send my ms application at the end of sem 7 and will not have any work experience by then. I also think there is less time for execution.
I am an EXTC student, so I am interested in the above scheme if atleast I get internship in electronics field.
Host a 'SPIT HACKATHON' at the start of Jan 2020 before we go for internships. Please bring in DIRECTI and MEDIA.NET for internships. Because if these aren't the best places for internships I don't know what are.
I believe it would be difficult for us to properly benefit from the semester long internship in the middle of our degree course. Such measures will be useful if implemented from the very first year. I fear completion of two semesters from May to December will increase our pressure, degrade the quality of education and will restrict us from taking part in different competitions.
No
Is it a guarantee that everyone will get internships in well respected companies?
NA
Hosting of SPIT Hackathon in Jan 2020 will be appreciated and companies like MEDIA.NET and DIRECTI should be brought for internships.
i feel it is very risky for my career. due to internship seventh semester will be of 2 months

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

only...manging study of all subjects,journal submissions,final year project will be diifcult for any person. i feel there are high chances of students of failing in exams and if any one gets KT in final year then it will be bad for his/her career. it may lead to not getting placed in good company. Students who want to do internship can do their internships in 2 month long hoilday.
It would be appreciated if college provides a written notice or some other drafted document which consists of all the rules and regulations related to the idea which is planned to be proposed. As it is a big decision it becomes very important for us to be clear with all the pros and cons of the idea proposed so that we don't make any wrong decisions in future. Even a meet should be arranged having a discussion related to the proposed idea with clear answers to all our questions.
I feel that the idea may not be practical as far as the electronics department is concerned . It all depends whether the college can actually convince the core electronics companies to come up and offer internships to those who are really willing to make a career in core electronics . Doing an internship in any company which is not associated with electronics seems to be largely unjust for my electronics department . Also If the semester has to be shifted , then maybe the vacation after Semester 5 can be reduced rather than taking things in a hurry in 2019 . I feel that the we are not right batch for the implementation of the above policy . However elaborate schedule can be prepared for those who are currently in Second year .
1.Is there any assurance from college that a student can surely get an internship given that student is more inclined towards internship? 2.Will college help in securing internship at IIT,NIT,etc? 3.What kind of internship will be launched by S.P.I.T. professor ? 4.What happens to a Student unable to secure i.e. exhausted all options?
1)It would be great if Etrx Students are able to get internships in their domain rather than in IT or Non-Technical Field. 2) It would be helpful if the confirmation for getting selecting in a particular internship is given as soon as possible that is before we submit our applications for various colleges for MS, so that we can include this internship in our resume.
TE students are too naive to decide what final career they want and doing a 6 month Internship could be a determinietial step in deciding the career of a student, let alone chosing the wrong internship and regretting later
Nil
Please increase number of credits for the internship. Please ensure that the internship will be well paid.
The decision has been taken at the last moment. We could have planned our semesters better had we been informed of this earlier.
Good initiative but hope the execution is smooth since 2 semesters are together
Not yet clear about this. Need a clearer vision and talk by hod about the complete implementation of this plan.
No issue
I want to be an Entrepreneur and start my own business and for that I need to acquire key skills in my respective field of interest, which I can start learning in the summer break and as a result upon completion of my graduation I will be ready and would have gained a lot of knowledge and a detailed know-how of how to run a successful business and gain plenty of knowledge about the field I want to start my business in. As the field I wish to pursue after graduation is not tech related summer breaks

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

are the ones where I learn a lot of stuff which will help me in the long run too. The summer break is very crucial for me as I get plenty of time to learn about the field I will be going into after graduation and it will give me a head start in boosting my business.
No comments, I'm happy with the change.
Please be clear about the companies coming for placement. Is there going to be any sort of changes in the current placement scenario. Are good companies going to come next year as well for internship+ placement.. or will we be saddled with weird companies just for the sake of internship
In order to make the proposed system successful, the college should ensure that internships are guaranteed to all students.
This internship offer should be open to students who want to go for higher studies. The selection criteria for the internship should be independent of the students further plans. For eg: if a company like Credit Suisse selects 10 students and 2 go for higher studies, it is still a very profitable deal for the company as 8 have retained. So this plan gives the companies incentive to offer internship and it also gives all students equal and fair opportunity.
I had plans to give GRE during summer vacations next year and also do an internship...Also students that are wanting to pursue MS will have to send an application next year to different colleges...The Summer internships that people do after their 3rd year are considered to be an important factor and given that we won't be doing an internship during that time will lessen our chances of getting into a good college....
No
No.
No.
No
Not one that I can think of.
1. It doesn't fit in timeline for students willing to pursue higher studies. 2. 16 weeks internship is fine (after sem 6 , i.e. In May - 2019) 3. Not ready for the change.
It would be great if non-tech/finance related internships are also available for students with a pointer above 8, and not just for students above 9. Because many interested and capable students miss out in this opportunity because of their pointer.
The short term should contain less syllabus and should be reliable
No.
I have selected yes
None
No
Yes
No
I think students will be too pressurized. There will be exams, project and internship. We don't have any idea about what will we learn in internships. What will be the benefit of the program to students aspiring for higher studies?
Schedule looks quite hectic. I would find it more beneficial if it's kept before semester 7.
Schedule is quite hectic. I would find it more beneficial if it was kept before semester 7.
It's *may be* because we are not sure which companies are coming. If 5-10 companies more like

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Credit Suisse i.e superdream are coming than that will be really beneficial for all the students and many will change their decision from NO. Even 100% placement is doubted and many are thinking to get 100% ,college will bring SP-TBI startups that no one will be willing to join after completing 7th sem as they are not reputed enough and does not provide stipend.

So, if we are guaranteed that the number of super dream companies are increased and, Everyone will be placed in decent companies than it is definitely yes from my side.

..

none

Too much burden in the final year

It would be tedious for the students. Completion of syllabus and lectures will be cramped, thus increasing stress on students.

No

It won't benefit me for higher studies

7 th semester should have all the important topic of 7&8 both semester

College should try to offer research internships too

It would be great if your MOOC courses have management courses.

Kindly take any decision keeping in mind the possibility that many wont be able to have such a long internship i.e 4 months

it will be very heptic for the students and will be very difficult for those who will be going for higher studies

The 8th semester internship won't help me with my choice of university for MS

The schedule is very hectic and risky and cannot be implemented for current TE students at this point of time. It needs more planning.

As there is still confusion in majority of students so Please keep a proper orientation seminar and explain us how the academic year will be carried on , how marks will be evaluated in ise,mse and ese.Also what about students who will complete there SCOPE course?

concept of semester long internship sounds good but the semester before it will be quite hectic for us,no summer vacation is the major problem,these are the only vacations during which we can join various other courses apart from academics .And if this idea is approved we need the detailed explanation of everything as many doubts are to be cleared.

Most of the companies which will come will be from it/finance. As an electronic student, these will not help for my career. Also if someone is aiming for future studies, he can't do an internship in electronics core companies like before, as student might have to sign bond with companies. He can't just to do a 1 month internship in core companies like before.

Irrespective of what the conclusion is, I would suggest to start the semester long internship course for people who wants and normal semester for those who don't. Also, include some non-tech internships.

Nice Initiative and Effective time utilisation

No comments.

the companies will give more preference to the students that want to get placed as in want the job, so it will be hard for the ones who want techinal internship and want to go for further studies

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

I believe this may put a lot of burden on students and the management to implement it within this short span. The idea is good, however I feel it's in everyone's best interest to implement it with more time in hands
If possible, let the system be as it is following currently. It provides certain flexibility to think and alter our future plans if required and clear BE not in haste
no
The original system(2 month internship after sem 6) would have been better than the two given options for our batch.
Wants to go for higher studies and internship in 8th sem doesn't make sense as we won't have anything to mention in our SOP and won't get an LOR. I am fine with the 4 month internship after sem 6.
I wish to go with the proposal.
None
No
I am not sure if it will be implemented properly and i am a bit apprehensive about this.
It is not the right time to take such a big decision in such a short span of time. We are already in the 5th semester. If the college wants to take such massive curriculum changing initiatives which affect a lot of plans of the students then they should inform before hand (i.e in the first year or at least in the second year). Making such a change in the 5th semester is too much. Do consider the 4 month internship after Semester 6, this plan is fair enough to all students.
.
this maybe be helpful for students who are planning to get placed after graduation. that too not all students going for placements will be beneficial from this. the scenario is completely opposite for those opting for higher studies. this scheme doesnt look helpful for those students at all.
NO
I think it is a good idea. Although may students are confused why to do internship if they get placed at the start of final year.
The 16week internship is a good idea but if it happens from Jan rather than May, it would affect people who want to pursue MS as the work experience highly matters in the selection process. Plus a person like me would have to wait an entire year to get the desired college for MS.
No
Please give us the detailed curriculum of last year that will be helpful to clear all the doubts.
It will be great if the internship was undertaken in Sem 7. It'll reduce the burden a little and help everyone.
Hope this helps in getting more super dream companies
It is very difficult to have a confirm opinion, students opting for post graduation courses would understandably have a lesser priority in the eyes of the recruiters looking for permanent employees, internships in core electronic firms would be difficult to aquire for the institute and students alike, doing internship for the sake of grades would be a very had approach, students who won't be able to aquire internships would be at a loss too. Personally, I think, after changing so much for the current TE students experimenting any further would be in bad faith as, we had joined this institute in hopes of being under MU and currently we are stuck somewhere amidst MU and Autonomy which is a really risky place to be in!

(Autonomous Institute Affiliated to University of Mumbai)

The college will need to be more proactive in getting internships which are not coding based
this idea about internship is good. because of this student will learn more practically and this will help for future
N/A
Internship will always help us build our career, but the main thing is we as a student are concerned about the 7th semester. Because we still are not clear about the plan of what will actually happen in that semester, what will be the grading scheme, adding all the core subjects should not turn out a burden because we will already have placements going along with BE project. So if the entire idea of what will happen in 7th semester, evaluation techniques, a drafted plan along with temporary dates would be a good help for a student to prepare himself accordingly. And also what happens with the students who complete their 6 tracks of scope courses? If an orientation or planned information in written was provided, then I would surely go for a YES
Proposing semester long internship sounds good and core industries require that much duration for internships but for that purpose, compressing the semesters duration, i feel risky because managing all subjects study, journal submissions, assignments & final year project will be very difficult for a slow learner or an average student. In case students get low score or may get kt in the final year, those students won't be able to get placement in good company, so doing that internship won't help. If this kind of internship sem is gonna taken then college should assure that every student will get internship according to their field of interest because most of the companies offer IT sector's work profile and I'd like to work with core industry, so this provision should be there or students should allow to do internship found by their own or else both 7th & 8th sem should be taken as is it is as per autonomy & further 16 weeks or 6 months internship program should be taken additionally.
Nothing
It's a great idea to permit students to opt for intership during 8th semester and students will have a good opportunity. (As they will gain practical knowledge). My concern is about the idea of two semesters(7th and 8th) to be completed in time span of 7 months (May to June, I assume). As there will be also Final year project and Placement opportunity during that period, it may become haptic for students to manage it. If we get to know in detail, how 7th and 8th semester will be conducted (like what will be the subjects, syllabus, paper pattern, etc), it will help students to take firm decision on this proposed idea.
I have selected YES.
Many students have already made plans for the future and started preparations for it. Changing the academic curriculum suddenly without a transition state would be highly problematic for the students future
Very good idea but enough internship opportunities at good companies must be provided
Suggestion: I would prefer internship immediately after 6th sem
No
Nope
Null
Nothing.
No
.
More number dream and super dream companies to come that guarantee more placements

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

I think, there will be much stuff to do in less time unnecessarily and will lead to losses. internships are not guaranteed and nor the research projects.

No

-

NA

no

I feel that though the semester-long internship may be a viable option for future batches, the risks involved for the current batch (expected 2020) far outweigh the success. Those students that only wish to opt for the internship and then pursue further studies do not have any option available to them, and also will have no industry experience by the time applications are sent to universities for further studies. Furthermore, the crunching down of 2 semesters into essentially one long semester is going to be extremely burdensome on the students. The alternative of extending the summer internship in the duration of May-Sept 2019 after the 6th semester seems like a better option as we both get the experience and also have the option of choosing whether or not to sit for placements later on.

Yes. It would be great if the college could provide us with a legal document stating the number of companies interested in this plan, along with the required signatures. This would help the college gain more trust from students.

NA

Proposing semester long internship sounds good and core industries require that much duration for internships but for that purpose, compressing the semesters duration, i feel risky because managing all subjects study, journal submissions, assignments & final year project will be very difficult for a slow learner or an average student. In case students get low score or may get kt in the final year, those students won't be able to get placement in good company, so doing that internship won't help. If this kind of internship sem is gonna taken then college should assure that every student will get internship according to their field of interest because most of the companies offer IT sector's work profile and I'd like to work with core industry, so this provision should be there or students should allow to do internship found by their own or else both 7th & 8th sem should be taken as is it is as per autonomy & further 16 weeks or 6 months internship program should be taken additionally.

No

1. Completing two semesters in a small period might affect my CGPA by a considerable amount. So it is not a wise trade-off for our batch as it was not being planned from our initial stage of the curriculum.
2. Smaller semester will restrict my learning only to the syllabus in my BE year, which is the prime time to learn new technologies that will give me an edge over students of other colleges.
3. A good BE project having social impact brings a lot of weight to my resume. College is the right time to do it. SPIT also gives us a lot of good opportunities to do so. Eg. Maharashtra Village

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

Transformation. 6 month long internship will not leave us enough time to do so.
4. I, as a student who might plan to do MS/MBA right after my BE, will send out application in my 7th semester.
My application will be missing any industry experience that other applicants will have.
Please give us a small vacation after sem VI final exam
Please give us a small vacation after sem VI final exam
It will be a bit hectic for us to complete the two semester within 6 month of period including the project work
-
I guess the idea is good but we doubt it will increase work load and hence are afraid.
In addition to that if we are having placements and then doing internship, at some point it dont make proper sense.
We think it would be difficult to complete our credits. Plus we will have our project too.
Scheme is good but planning for this will be hasty and not well-implemented so this should be held off for current students of TE
I like the concept of semester long internship only if it is provided between May to October/November. Also you shouldn't distinguish between students who want job or not as it reduces the chances of selection. I don't know what type of companies will provide internships and it is risky. also we don't have enough time to execute it successfully.
THE IDEA IS BENEFICIAL ,AND IT WILL BENEFIT MANY STUDENTS,PLZ IMPLEMENT THIS IDEA AND GIVE STUDENTS ASSURITY THAT EVERY STUDENT WILL GET PLACED
no
There should be 100% placements for students so it will be good for everyone.
In favour of this Idea
I am most concerned about not having an internship experience for masters and I'm extremely apprehensive about the proposed time table since such a drastic measure need not be taken in a hurry. The plan should be implemented next year with the current second year students with proper planning. Since the semesters are going to be merged the workload will increase and there won't be enough time to prepare for internships or self-development.
keep the two month internship during the summer and continue the normal semester schedule for semester 7 and 8
No comments
It should have been planned for first year students as they can plan other activities more efficiently. It is very hectic and risky for third year student.
Nop
Very risky and hectic at this point of time. Will be difficult for TE students to implement other plans if any.
No other comment and suggestion
I have selected yes
what if anyone cannot be placed in intership...?
I have chosen 'Maybe' because in some cases where student wishes to go for MS , an internship or work experience record is required to be submitted at the time of application(start of 7th sem) and even a recommendation from the institution from where he/she has done internship helps. So if the above idea is implemented students won't have any such recommendation or work experience when

Sardar Patel Institute of Technology

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India
(Autonomous Institute Affiliated to University of Mumbai)

applying for MS , that is my concern.
I'm going to take up further studies post engineering and I don't see the system to work well in my favour
College should assure that students get ample opportunities irrespective of branch.
I think it would be better if I do internship after semester 6 because it will add to my work experience before placement
No
Concern is that we dont get contract signing by the company in jan itself so that those whose cat/gre/gate results r great they can go after the internship nd not get stuck
We'll have to face 6th,7th,8th Semester one after another without any vaction in between them. This will become very Tedious. Might be we can't cope up with this.
Its a nice step as Internship Provides Real Life Experience and Exposure
When will we be getting a detailed roadmap about this ? And also if possible can we get the syllabus and other course details of sem 7 and sem 8 as soon as possible.
Can we be provided assurance about companies being more inclined towards having students for 16 week internships than 8 weeks?
I don't find it useful for me as I have to pursue higher studies .
None
Students should be given more time for making such decisions, the rule stating internships identified by students needs to get approved by SPIT seems unfair also student must allowed to do internship at institutes such as VJTI, KJSCE, SPCE, etc.
No
The System currently in place is good enough and I don't feel the need for a change.
Ok, but need not be undertaken right now!
There will be quite a hurry for 7th sem just after 6th sem and it's not guaranteed that each student who wants to opt for internship and not for research gets that from college tpo.
If I plan on doing an MBA will I be given a non technical internship along with a PPO at that company if I perform well ?
When we apply for ms in sem 7 if we have not done internship after sem 6 then we will not have a letter of recommendation from the internship place which puts us in disadvantage.
No

**Summary of Program Exit Feedback/Suggestion for Curriculum Revision
BE(Computer Engg) Batch of Year 2016-20**

- 1) Competitive coding should be added in curriculum as a part of practical session, so that it'll help during the campus interviews.
- 2) Practical/lab/experimentation sessions should be made primary and theory sessions secondary in terms of hours allocated, importance, grading.
- 3) Android development and python should be included in curriculum.
- 4) Engineering Drawing (Only the paper part) should be upgraded using AutoCAD.
- 5) Syllabus of AI and ML should be upgraded according to industry standards.
- 6) Biology can be excluded from the curriculum with the depth that the course was, has no industry value for a computer engineer. It will better suit as a SCOPE course rather than a compulsory course.

Curriculum Feedback

1. Are there any resources or services that you would like to see offered to Graduates?

14 responses

No

1. More powerful machines to more students.
2. Better Project development facilities like dedicated labs etc.
3. In case of a big SEVA event, travel services from the main station of the event to the event itself.
4. SEVA activity locations need to be chosen more carefully as the ratio of travelling time to actual time spent on the event should be minimal.

NA

The computers should have GPU in them for faster computation

Softwares that are needed for the practicals can be pre-installed on systems so that the students do not waste time configuring the systems and can focus on implementing the experiments.

Stipend based research work in campus itself.

Nothing.

Coursera and udemy courses

Not any

2. Could you provide suggestions for how to improve Graduate program?

14 responses

No

1. Currently, the amount of stress that the students have to go through is huge. This can be catered if a well defined harmony exists between the subjects and their curriculum so that the students can focus their attention only on one subject at a time.

We can add competitive coding as a practical only to solve codes that are asked in interviews. We can also add python as a subject that will make everyone familiarise with its syntax

Competitive coding activities can be included to improve coding skills for hackathons.

By making practical/lab/experimentation sessions primary and theory sessions secondary in terms of hours allocated, importance, grading, etc.

Open specialized labs for domains (example AI) where faculty can take up research projects and students can work under them for the same.

Coding languages and their frameworks need to be taught well before and seminars should be conducted for students to explore and perform project tasks on the languages.

more of a practical learning than theoretical

NA

Not any

3. Any Content/Course you need to Add to Curriculum of any Semester?

14 responses

No

1. Machine learning as a theoretical course staging the fundamentals.
2. The ABL5(Taxation, Financial Planning) to be included as a main subject for BE with competent enough faculties for students to understand money in depth.

We can add competitive coding as a practical only to solve codes that are asked in interviews. We can also add Android development course as well

Courses regarding Software Development, which aim at building a full fledged products can be included to give more exposure to real world problem solving.

Introduce Python as a programming language in earlier semesters
Syllabus of the ML and AI modules needs to be upgraded
Introduce technology actually in use in the industry

1. Version Management (git) (From Semester 3)
2. Game development (4th or 5th Semester)

NA

no

Deep learning (python)

Not any

4. Any Content/Course you need to Remove to Curriculum of any Semester?

14 responses

No

1. Biology - because I cannot see a single place where I can place this subject in my profile and according to me, with the depth that the course was, has no industry value for a computer engineer. It will better suit as a SCOPE course rather than a compulsory course.

2. Engineering Drawing(Only the paper part) and use AutoCAD

We had a duplication of courses in AISC and FCI so remove one of them

Courses which have a non-null intersection of syllabus can be redesigned.

Redundant courses such as Machine Learning or Fundamental of Computational Intelligence which were in same semester.

We had open elective FCI in sem 6 and a subject AISC in sem 7 which had major portion of overlapping content. Another elective DMBI in sem 7 also had some overlapping content. If these could be avoided it would be nice.

no

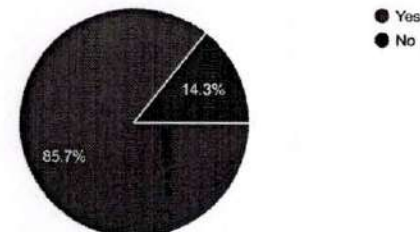

NA

Fundamental of computational intelligence (FCI) and Artificial Intelligence and soft computing (AISC) have some similar topics in sem 7

5. Would you like the idea of a product development center to be initiated in the department where collaborative products can be developed?

Copy

14 responses

If Yes, Give your Suggestion.

5 responses

The main goal of product development center should be to provide industry related knowledge to the student, wherein developing softwares in collaboration with companies can be one of the way to achieve this. Also involvement of all the students in the department would benefit a lot to all the stakeholders.

This could be a non-curricular program where students can pitch their ideas and those ideas which are relevant can be developed with the help of students and teachers. Specific faculty must be assigned to mentor the students in order to get the best results.

First up products can be developed for the problems associated within department such as attendance system, digital notification box, etc. Then ideas can also pertain to solutions for other problems outside.

We can develop projects in collaboration with some industry

Curriculum Feedback

1. Are there any resources or services that you would like to see offered to Graduates? *

No _____

2. Could you provide suggestions for how to improve Graduate program? *

No _____

3. Any Content/Course you need to Add to Curriculum of any Semester? *

No _____

4. Any Content/Course you need to Remove to Curriculum of any Semester? *

No

5. Would you like the idea of a product development center to be initiated in the department where collaborative products can be developed? *

☒ Yes

☐ No

If Yes, Give your Suggestion.

The main goal of product development center should be to provide industry related knowledge to the student, wherein developing softwares in collaboration with companies can be one of the way to achieve this. Also involvement of all the students in the department would benefit a lot to all the stakeholders.

Curriculum Feedback

1. Are there any resources or services that you would like to see offered to Graduates? *

Softwares that are needed for the practicals can be pre-installed on systems so that the students do not waste time configuring the systems and can focus on implementing the experiments.

2. Could you provide suggestions for how to improve Graduate program? *

Competitive coding activities can be included to improve coding skills for hackathons.

3. Any Content/Course you need to Add to Curriculum of any Semester? *

Courses regarding Software Development, which aim at building a full fledged products can be included to give more exposure to real world problem solving.

4. Any Content/Course you need to Remove to Curriculum of any Semester? *

Courses which have a non-null intersection of syllabus can be redesigned.

5. Would you like the idea of a product development center to be initiated in the department where collaborative products can be developed? *

☒ Yes

☐ No

If Yes, Give your Suggestion.

This could be a non-curricular program where students can pitch their ideas and those ideas which are relevant can be developed with the help of students and teachers. Specific faculty must be assigned to mentor the students in order to get the best results.

The syllabus was challenging.

 Copy

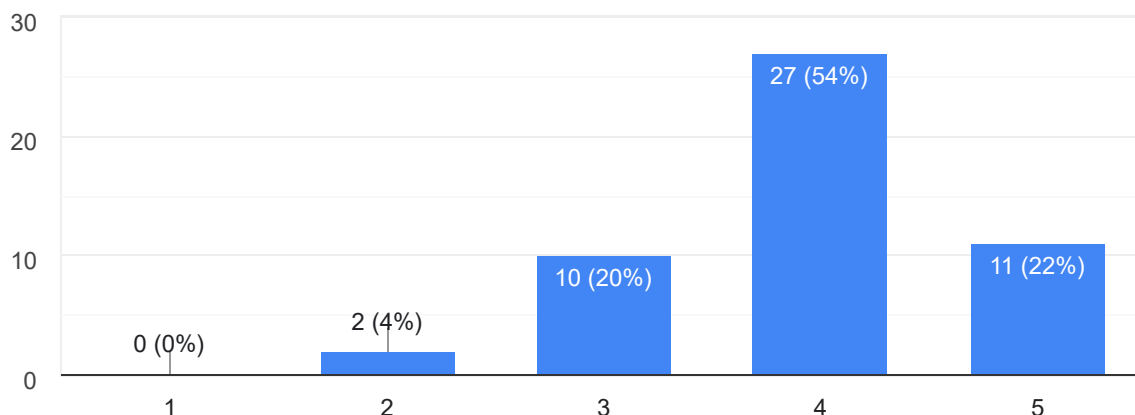

50 responses

The depth of the course content is adequate in relation to the expected Course Outcomes (COs).

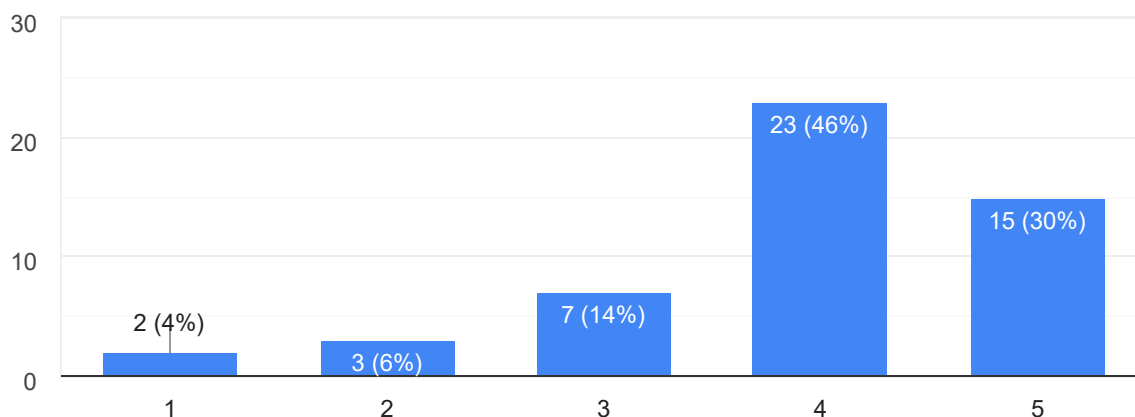

50 responses

The syllabus enabled me to improve my ability to formulate, analyze and solve problems.

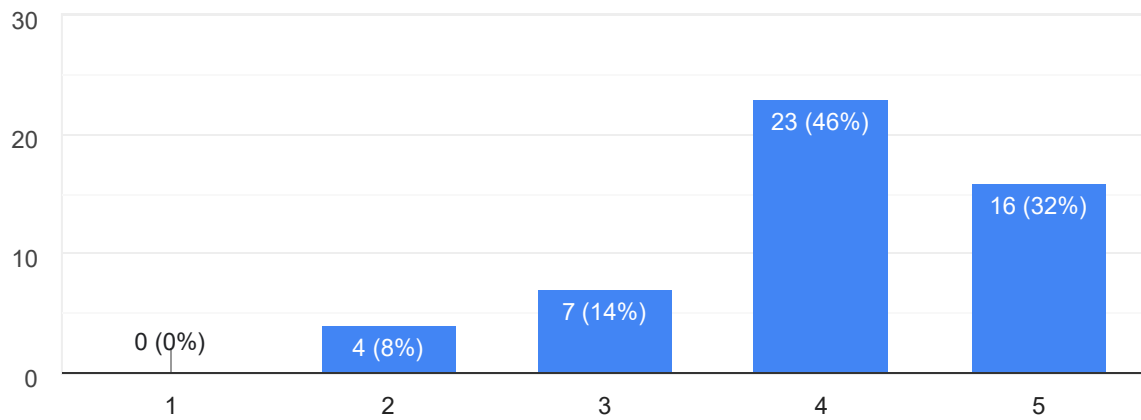

50 responses

The recommended textbooks are adequately available and map onto the syllabus.

50 responses

Recommendations for course improvement (Please specify topics that should be added/dropped from the course, new books to be recommended, changes in teaching scheme and experiments, etc. if any)

50 responses

No

-

None

NA

Na

Practical application of the topics should be stated in a better depth.

More books to refer

Less no. Of Kumbhojkar books in the library

More linking of the subject with future subjects requiring those concepts

Maths should be taught according to requirement of the engineering subjects. All of the maths taught was just formulae and few sums from kumbhojkar without explaining the concepts properly.

none

Should be mcq based and more experimental

Topics like regression can be added which is the base for ML

Both AM-1 and 2 should be given to CRG Sir

No.

Ref books are seriously not needed, don't scare students if they are using only kumbhojkar.

None.

Its proper

The questions were often very straight forward and from

Few topics which are really useful in machine learning problems can be taught

More application based topics can be added

Better faculty.

It would be better if GATE Maths syllabus is adopted as a part of curriculum so as to prepare students for higher studies as well and before time.

certain topics were extra which were of NO particular use in further TE or BE and their basics was ONLY useful while we studied in depth of that particular topic. Like In BE there is 3 credit system similar should be implemented in Applied Mathematics I & II. In recommended textbooks please add G.V.Kumbhojkar Applied Mathematics.

Some chapters supporting electronics subjects like Laplace and Fourier transform need to be taught in context. So, it would be better to leave it to electronics teachers to teach them while reducing maths portion and adding it on with other electronics subjects. Or add an additional section in maths itself which will be taught by electronics faculty in proper context keeping a single ESE for maths with sections.

It should be more application based

An intro to stochastic processes and statistics should be added

Good amount of emphasis should be given on topics which will be used in future, like Fourier transform

Add more chapters related to statistics and probability

One reference book and teaching style should be followed.

Include topics which will help students in subjects and projects in future.

Some topics in probability were not there in the syllabus like regression, correlation etc.

Fourier

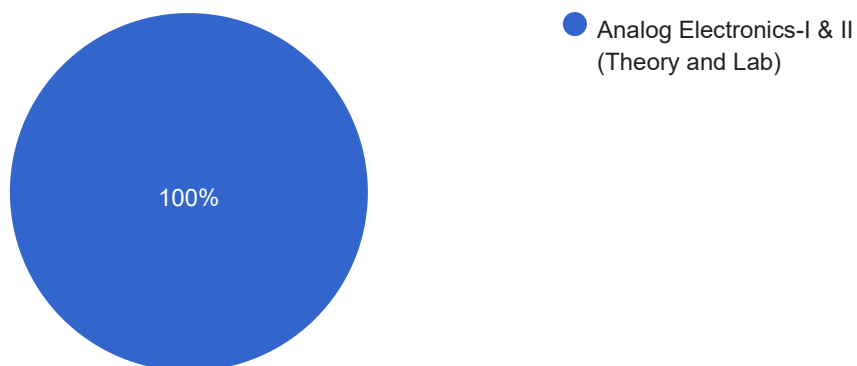

There is focus on only solving problems in mathematics, where as a little should also be in applications (not just word problem based applications)

Syllabus should be more focused on practical stuff

Some senior faculty should be in charge of such important core subjects, so as to maintain strictness and generate more interest in the subject.

Nothing much

Lot of repetition with future semesters, portion should be reduced focus on simulations should be increased to help visualisation

Ae 1 was poorly taught with just slides of neamen book. Ae is a difficult subject with lots of concepts and Extremely important for electronics engineer. In lectures (ae1) only few derivations were taken without teaching the basic concepts.

none

This subjects should be objective type

Being a very important subject for electronics, it should be taught in a much more effective way.

Najib Sir is best for Analogy Electronics

No.

No recommendations

None.

The syllabus was never clear. Especially for AE-I which had a fair amount of theory too.

AE1 seems to be purely theoretical while AE2 is purely numericals. It would be easier for the students if both subjects had theory as well as numericals.

Improvements in practicals

Syllabus related to latest research

Since core subjects are a bit difficult students tend to mug up just for the sake of passing the exams and have no working knowledge of the subjects. If the professors can learn how to deliver the content a bit better and come prepared with various materials like interactive videos explaining some difficult concepts and giving resources from time to time to the students which will help them understand the concepts would be really beneficial.

Analog Electronics-I & II were not balanced as AE 1 dealt only with the theory part while AE 2 was majorly numerical's. It should be combined and both should have equal portion of theory and numerical's, In both AE 1 & 2. Recommended textbooks were adequate but certain simplified NOTES/Simplified Resources should be provided in the class and that should be sufficient just like Talele Sir, Karia Sir and Bhagat Sir. For Lab Digital medium such as Moodle should be used rather than journal fill up OR providing a set write up where the students only have to write the conclusion and the observation table/graph.

During our labs we felt a need for working DSO and CROs in the lab. Also, if the lab timings are shifted to morning rather than afternoon the outcome of labs will be better according to me. Supposing that theory of a experiment is not taught before the practical then taking a theory lecture for the same during practicals is also a good idea, and shift the practical to next turn or some other time. Otherwise the syllabus and subject was good and challenging. It should be less derivative

NA

Syllabus is good

AE - I syllabus was a bit more. Maybe try slightly reducing it.

The topics taught in class should be simultaneously done in the labs as well for better understanding of topics

This course is fine just make an option between core and tech subject. So students who want to choose core company they will choose AE and others will tech subject.

No comments

Basics before starting it.

The theory is too in depth, and while some students who wish to go forward in this domain will need this subject, others who wish to go in other domains will not need such an in depth understanding of this subject particularly AE-I. AE-II is still somewhat required.

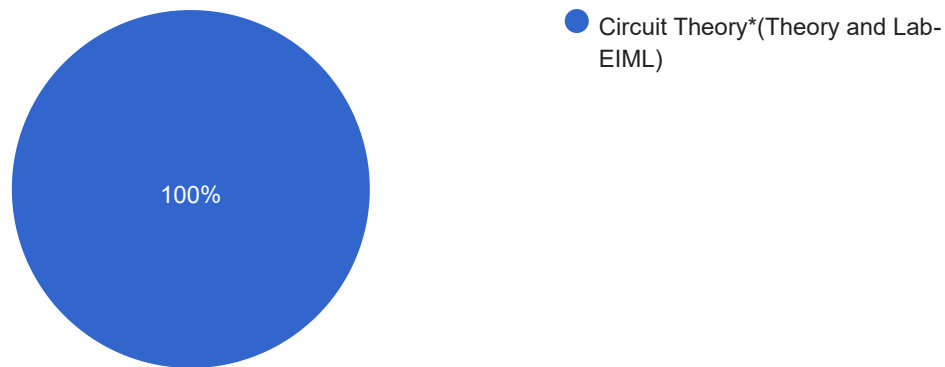

More emphasis to be given to basics and foundations of electronic devices than just they're working

Not any specific

Circuit simulations on softwares like TINA, multisim and proteus should be more taught so that the students are used to then and have a good hand on it when they actually do it in the next semesters.

Nothing much

Increase book availability

Good

Only use of this lab was to write journals and nothing else

Practicals can be improved.

No.

No recommendations

None.

The labs sessions were not related to the theory we were taught. Although individually they both were very interesting

Syllabus related to latest research

This subject is really important and was one of my favorites since mathematics was involved so personally it was a good experience for me.

Like AM 1&2 its Syllabus can be simplified. Recommended textbooks were certainly carrying extra things, so simplified notes/online PPT's Resources can be used and provided. For Lab Digital medium such as Moodle should be used rather than journal fill up OR providing a set write up where the students only have to write the conclusion and the observation table/graph.

The subject was very easy and there were no tricky or difficult exams taken and it became very easy to score good marks in ISE and ESE. Some percentage of questions could be tough if req only then the pointer system will create a defining difference.

Again it was good

One type of teaching and lab methods should be done for all batches during labs

Same as above

No

No comments

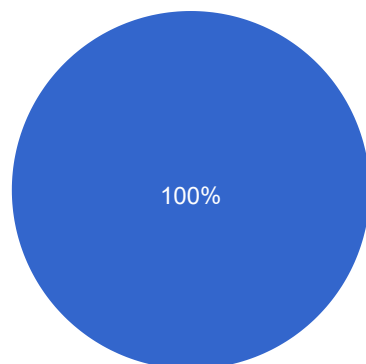

More outcome driven practicals should be encouraged

EIML journal should not be there. It wastes lot of time.

The last module theory part was ignored because they said it would come back in the next semesters. They should be given a good introduction and shouldn't be ignored.

Nothing much

Good

Lab is ok but should be of application oriented

More focus on project should be given.

No.

No recommendations

None.

Was taught to us by Bhagat Sir, the notes were incredible never felt the need to open external notes or reference books. Definitely everybody's favourite subject

A few students from the current second year seemed to have a difficulty with 2 faculty teaching the same subject, and not in sync. If this could be rectified, it would be highly beneficial for the students.

So e topics can be added to teach with application point of view

Too easy

Bhagat sir really helped us to understand this subject better at core level and cleared our concepts and doubts from time to time.

No

Since this subject is now thought to FE's the Notes which we used to make during the lectures of Bhagat sir were sufficient. We still remember K-maps so thus teaching method also plays an important role. In lab experiments moodle can be used so complete digital medium.

So the experiments were on point and the learning was a lot. The syllabus was easy but as it was completely new the difficulty level was adequate as it required regular studying.

More about PLA and FPGA etc

One teaching method and reference books should be included so as to avoid confusion.

It's a basic course for the microcontroller and microprocessor based subject in future so it should be more in depth.

No comments

No. It was very good

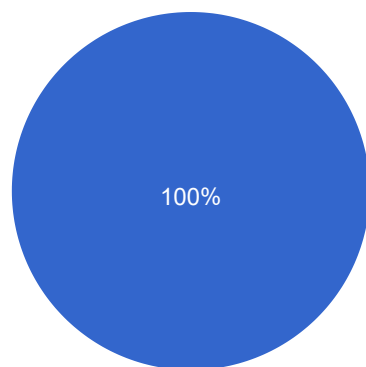

More emphasis on the actual theory of this subject is needed

Subject was really nice

NA

No

none

Time management was an issue, as in the syllabus was hurried in the last few weeks and doubts solving was not up to the mark. Important topics like plots should be taught in more detail and students should be explained their practical relevance.

Nothing much

Control systems is a subject which is prerequisite for many future subjects. Overall focus was on sum solving for the lectures. Laboratory needs to be improved to teach students real world applications of control systems instead of teaching abstract concepts without giving their actual use. The basics of maths like laplace transform should be taught again with subjects perspective as the concept is taught in am1.

No use of this lab

Demos of controllers like PID should be shown to students in real life.

No.

No recommendations

None.

Na

More focus on applications such as PID/PD/PI controllers and other real life applications

Focus should be more on the application part of the subject

More on PID control

Improve the syllabus. Give it maximum priority. This is very important subject application wise and include better industrial experts to give talks

Topics involving log graphs should be taught as how to analyze and deduce information from it rather than telling students to make graph in exams.

like previous subjects AM 1&2 CT syllabus can be simplified For labs submission through digital medium like moodle /netclouds can be used, and reeducing its credits to 3

In this subject we were not able to get a good flavour and understanding of the last few topics like bode and Nyquist plot but it was challenging enough. Teaching could be a bit more application oriented.

More focus on PID controllers and more real life control systems related examples

The lab wasn't structured well and the experiments should have been explained better. If not, then this lab didn't improve anything overall.

In lab demonstrate real life application more.

YES

No comments

It was good but challenging

More contemporary things about this subjects should be taught as this is a very important subject

web

A skill development programme for students.

React, Angular, Kotlin

The courses that already exist are perfect, but i think the course operating system is not required much .

Data Mining, Graphic Designing, Programming

Aptitude and Personality Development Course (**Why to be added ?** Ans: Knowledge cannot be represented without a good moral and communication skills and all these things can be developed by good aptitude and personality)

nothign AI,ML

IOT

Deep learning

Advanced Web Technologies like (mean , mern stack technologies) also working with NoSQL DB's. Cloud technologies are being included in many course syllabus so that can be also a good addition with current market scneario.

Theory Of Computation

Robotic Process Automation

cyber security,machine learning,data science,artificial intelligence

Flutter,Big Data,React

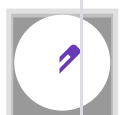

No

React JS

Deep Learning

Artificial Intelligence,Big Data,Advance Penetration Testing

Multimedia

block chain

Introduce AI, ML, Deep Learning, Block Chain etc in the earlier semesters and add trending technologies in the later semesters

Ethical hacking

IOT, AI, ML, Deep Learning

IOS Courses

Deep Learning

This curriculum is good

Any technical language / course, preferred is Cloud Systems (Computing) Data Mining

android or Game Development

android development

advance javascript Its

good the way it is

nothing

web designing

Block Chain

SQT (Software Quality Testing) Automation

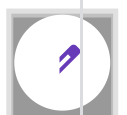

More personality development courses

Data Analysis, IOT

IOT and ML

Game/Graphic Design

Data science or any Courses that are demand by industry

Android

Docker, Reactjs, Nodejs, Jenkins, Jira, Git

Data Science

cloud computing

python

Any suggestions for the present curriculum?

68 responses

None

less college time,

Curriculum is great just a bit to congested

4/5

is good but looks more of basic rather than master level

DAA practicals should be scheduled twice a week

I feel the software project management subject is repeating.since we had the same project management subject in the last sem

Ds should be language independent

Have more seminar and workshop on ML and NLP

I think sequence of subjects regarding Data Analysis are Machine Learning should be changed Try

maintaining a good balance between theory and practical

conduct more workshop on frequently used or new technology.

A more practical focussed curriculum would be better

No suggestions, Its perfect

Everything is good, just OS is not a current need, maybe you can add in Cloud

Change SPM professor

No suggestion Its

upto the mark

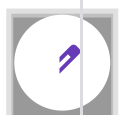

session should be of 9-3 pm

The mini projects are not mini so if possible let there be 1 project for the entire academic year

less college time

Software Testing could be a part of the course in Sem 3. Change the SPM

Professor

more options for mastery in particular streams, through electives or projects.

STQA should be a Tutorial and NLP should be a Practical

ML must be thought early.

Practical timings should be on mon, tues, wed. SPM and os should not have ESE.

Teaching is too fast please make it little bit slower

Should be updated according to industry standards

Student Feedback

A.Y. 2022-23

Sardar Patel Institute of Technology

(An Autonomous College Affiliated to University of Mumbai)

Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai 400058, India

Program: CE

Bharatiya Vidya Bhavan's

SARDAR PATEL INSTITUTE OF TECHNOLOGY

Munshi Nagar, Andheri (W), Mumbai – 400 058.

(Autonomous Institute Affiliated to University of Mumbai)

Department of Computer Engineering 2022-23

Students' Feedback Summary

- Programming languages and technology courses should have more emphasis on labs sessions.
- Data Structure and Algorithms should focus more on lab sessions.
- Basic science courses like Physics, Chemistry, Engineering Drawing, Engineering Mechanics should be reduced.
- Courses in Finance and management should be included.
- Soft skill course should cover aspects such as personality development, public speaking, group discussion, interview preparation, presentations could be included.

Do you believe there is a Progressive Continuity (from Sem I to Sem VIII) in the subject taught during entire Program ? *

☐ Yes

☒ Other: No

Mention Courses for which only Laboratory courses (No Theory) should be offered ? *

NLP or most program electives

Give your views on the effectiveness of project-based learning as practised during your academic courses? *

Project based learning should be more as it helps build concepts

Do you believe that existing curriculum is industry oriented? *

☐ Yes

☒ Other: No, by a longshot, seen during my interviews

Mention subjects/skills that you believe are required for you to be industry ready ? *

Core java which is not focused enough and more latest technology like cloud based stuff

From existing curriculum mention the courses which you find redundant? *

All basic of sciences courses

Suggest non-technical subjects/skills to be incorporated for overall development of engineering students ? *

None

Any comments/suggestions *

Make mandatory attendance for theory atleast 50%

Do you believe there is a Progressive Continuity (from Sem I to Sem VIII) in the subject taught during entire Program ? *

☒ Yes

☐ Other:

Mention Courses for which only Laboratory courses (No Theory) should be offered ? *

ADV, PSIPL, PS00P, HMI

Give your views on the effectiveness of project-based learning as practised during your academic courses? *

More focus should be paid to the technical aspects of the project instead of focusing on creating presentations. Presentations are already a part of academics.

Do you believe that existing curriculum is industry oriented? *

☐ Yes

☒ Other:

No. Most of the companies hire for the role of a software developer engineer, which is not a part of existing curriculum.

Mention subjects/skills that you believe are required for you to be industry ready ? *

Soft skills, Data Structures and Algorithms, Good Projects and a Good Resume Building Skill

From existing curriculum mention the courses which you find redundant? *

None

Suggest non-technical subjects/skills to be incorporated for overall development of engineering students ? *

Interview taking ability, Case studies and Public Speaking

Any comments/suggestions ? *

The weightage of marks for Lab component should be more.

Munshi Nagar, Andheri (W), Mumbai – 400 058.

(Autonomous Institute Affiliated to

the University of Mumbai)

Project Based Learning 8/10

Application based

Idk

When teacher uses more examples/Diagrams to explain concept -5

The teaching methodology I would appreciate the most is one focused on how we can convert classroom knowledge to real world applications. The mini project was nice but there was no solid guidance given to have the coding skills and other abilities required to do a good job. My mentor wanted us to do all the work and not give any help at all.

Less dependence on ppt and more oral explanation

Introduction of Mini Projects

Learning through lab experiments 4

Practical learning

Clear explanation with many example solving

3

The Project based Learning and the way Mini Project was conducted is really commendable Interactive classes are good, the one in which teacher asks questions to students.

-

Learning by doing projects - 4/5

Methodology which Narendra Bhagat Sir uses and rating is 5

Different activities in class which helped in remembering the concept better.

Use of smartboards for teaching is something I like the most but more visual effects must be used there and it should be available to each and every course.

Practical approach - 4/5

Activity based teaching 4/5

I would give 5/5 star for teaching style interactive learning with some real world problem explanation and clearing concepts through that questions

9/10 NA

they teach step by step everything

In class examples and simultaneously solving sums in class rather than reading from pdf

.

Traditional classroom teaching with application based rather than memorization.

Interactive, experimental

Project-Based Learning. 5

N/A

Ppt+ blackboard+ discussions 10/10 fuck you

Learning by doing Projects

I like that some teachers are really interactive with us and have proper technical and creative conversations with us rather than just reading out text from some pdf

Practicals-5

Bharatiya Vidya Bhavan's

SARDAR PATEL INSTITUTE OF TECHNOLOGY

Munshi Nagar, Andheri (W), Mumbai – 400 058.

(Autonomous Institute Affiliated to

the University of Mumbai)

Mention below the teaching methodology you liked the least and give its rating.

Teaching Methodology-

Lecture 5/10

Theory

Idk

Slide presentation -3

Not the teacher's fault, but the curriculum is fairly outdated. I don't see the point in studying COA and DBMS when we weren't really taught how to use the software to make products.

Reading off the ppt

Everything is fine

Ppt teaching 1

Theoretical

Continuous theory explanation

3

Labs should be more relevant Non

Interactive class.

Np such methodology

Methodology used by PBB sir

Things that we will be knowing the concept in advance or to learn things on our own Almost every teacher is using PPTs to teach and most of the modules they are just reading the PPT instead of teaching them and when exam's came we study the entire syllabus using online lectures. Thus PPTs should only contain headings and subheadings and teacher must provide notes in their own language.

-

Reading the ppt 2/5 Simple and easier just reading content from ppt and dont go in depth for further clearance of that topic 9/10

Bharatiya Vidya Bhavan's

SARDAR PATEL INSTITUTE OF TECHNOLOGY

Munshi Nagar, Andheri (W), Mumbai – 400 058.

(Autonomous Institute Affiliated to

the University of Mumbai)

NA nothing

Self study part

.

Lower memorization and more logic based.

Just reading the slides or just solving the questions by reading solutions.

Teacher centered approach. 2

N/A

Only ppts 3/10 fuck

you

Wrote learning answers, especially code which we were asked to do in DSY LA lab by Shukla

Sir

Theory-2

Suggestions for further improvement in curriculum

Bharatiya Vidya Bhavan's

SARDAR PATEL INSTITUTE OF TECHNOLOGY

Munshi Nagar, Andheri (W), Mumbai – 400 058.

(Autonomous Institute Affiliated to

the University of Mumbai)

NA

-

No

None

Flipped Classroom, Inquiry-Based Learning

I like everything

Gaps between MSE/ESE exam's and more competitive programming contest /Workshops on ML/Frontend etc

Focus the curriculum on real world industry nodes. Coding in Flask, Node JS etc rather than expecting the students to learn on their own.

More and updated electives

Introduction of regular test assessments weekly which get counted that will ensure regular studies instead of one large 100 mark exam at the end and introduction of projects in every subject No

Course should be designed as useful for modern demands of industry.

Making some topics up to date maybe

Including practical learning activity

Let DS and DAA have more coding also try to do something so that FE students do

Development Web dev as in SE they will have enough info for SE projects and then they can focus on DSA and core subjects which are also imp Including more application based projects.

More activities based learning

ISE exam pattern is very random based on subject teachers, it should be made fixed similar to MSEs and ESEs.

Should enhance interactive teaching just avoid reading ppt in front of class and give then a crystal clear explanation of a concept

no

Less theory and more practical based subjects, less difficult self study part

Lower course work and more project work. Less syllabus and more innovation.

More projects less theory

More activity based learning, more weightage to actual industry oriented skills in syllabus If Machine Learning is taught in 5th Sem (instead of 6th) then we can use that knowledge while making mini project in 6th sem.

fuck you

Add more electives

Lenient time constraints on assignments

Suggestions for further improvement

Bharatiya Vidya Bhavan's

SARDAR PATEL INSTITUTE OF TECHNOLOGY

Munshi Nagar, Andheri (W), Mumbai – 400 058.

(Autonomous Institute Affiliated to

the University of Mumbai)

I like everything currently

The faculty must be more involved and have a greater concern for the development of the students. It is not enough to force them to study for marks, they must develop a love of learning in their students. That is the mark of a great teacher. Improve faculty

No

Remove attendance limit

NA

NA

-

fuck you

Reduce the no. of hours of attendance compulsory, so that students would get some time to revise what has been taught, explore new fields, learn skills, build projects and engage in (internships, hackathons, competitions)

Remove mandatory attendance
